02-Dec-2014

Dear Dr. Stevens:

Thank you for reviewing manuscript # BOOKS-2014-0029 entitled "Advances in Hydraulic Fracturing Fluids" for the ASTM-Books.

My name is Kathy Dernoga and I am the Managing Editor for Technical Books and Journals for ASTM International.

Peer-review is an integral part of the publication process. We select reviewers based on their internationally recognized expertise, demonstrable research abilities and experience, prior review experience and critical judgment of the subject matter.

Reviewing papers for publication is perhaps the highest mark of respect bestowed upon a researcher. To be asked to review a scientific paper is an acknowledgment of a researcher's superior knowledge and experience. The reviewer must take the responsibility upon himself/herself to judge the work for originality, accuracy, and relevance. This is no simple task in the sciences. When the paper is finally accepted for publication, it is an honor not only for the author but for the reviewers as well.

A crucial part of ASTM's mission is to provide highly relevant technical information. Our journals undergo rigorous peer review to ensure the high quality of its technical materials. The referees submit their comments and opinions that form the basis upon which the Editor will decide whether or not to publish the paper, and with what changes. The review process ensures that all authors have equal opportunity for publication of their papers.

We sincerely thank you for your contribution as a peer reviewer. If you were not to remain anonymous to the authors, I'm certain they would thank you for your thoughtful, educated recommendations.

If you are not already a member of ASTM International, we welcome you to join the conversation. Go to <http://www.astm.org/MEMBERSHIP/index.html> for membership details.

Sincerely,
Kathy Dernoga
Managing Editor
ASTM International
